

ZAIN UL ABIDIN

Full-Stack Software Engineer

+923335771397 | hizainulabidin@gmail.com | linkedin.com/in/z4yn | github.com/guesswhozayn | z4yn.vercel.app

SUMMARY

Results-driven Full-Stack Software Engineer proficient in designing and deploying scalable web applications using React, Node.js, and TypeScript. Adept at building robust RESTful APIs, optimizing database performance, and integrating modern Web3 and AI infrastructure. Strong focus on clean code, system architecture, and CI/CD pipelines to deliver high-impact, user-centric solutions.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Solidity, C++, SQL
Frontend: React.js, Next.js, Redux, Tailwind CSS, HTML5/CSS3, WebSockets
Backend: Node.js, Express.js, RESTful APIs, GraphQL, Microservices, Socket.io
Databases: PostgreSQL, MongoDB, Redis, Mongoose, Prisma ORM
DevOps & Tools: Git/GitHub, Docker, CI/CD, Vercel, Render, Linux, Jest, Postman

PROJECTS

Picket: Agentic Candidate Screening Platform

Jan 2026 – May 2026

picket-hr.vercel.app

- Compressed candidate pre-screening from days of manual effort to under **5 seconds** per applicant by building an end-to-end pipeline with **Node.js**, **BullMQ**, **Redis**, and a three-agent AI system that runs background checks automatically.
- Reduced time-to-hire by removing **85%** of pipeline noise before any recruiter sees a profile, letting the team focus entirely on qualified candidates without adding headcount.
- Delivered live pipeline visibility by pairing background job processing with **Socket.io** broadcasts, so recruiters see candidate status updates in the dashboard within **80ms** of each screening step completing.

Attestify: Blockchain-based Academic Credential Infrastructure

Oct 2025 – Mar 2026

attestify-alpha.vercel.app

- Shipped a blockchain credentialing platform with **React 19**, **Node.js**, **MongoDB**, and **Ethereum** that lets universities issue tamper-proof academic certificates and lets anyone verify them publicly, eliminating the need for manual verification calls entirely.
- Made certificates permanently accessible by storing PDFs on **IPFS via Pinata** and linking the content address on-chain, so student records survive even if the issuing institution's servers go offline.
- Minted Soulbound Tokens (non-transferable **ERC-721**) directly to student wallets as an optional credential format, giving institutions a way to issue credentials that students own but cannot sell or transfer.

EDUCATION

The University of Chakwal

Chakwal, Pakistan

Bachelor of Science in Computer Science

2022 – 2026

- CGPA:** 3.43 / 4.00
- Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Web Engineering, Operating Systems, Software Engineering, Artificial Intelligence

PUBLICATIONS

Attestify: A Hybrid Blockchain-IPFS Framework for Credential Verification

June 2026

Published in Spectrum of Engineering Sciences

- Authored a paper proposing a novel decentralized architecture combining non-transferable Soulbound Tokens (SBTs) and dual-anchor document integrity (SHA-256 and IPFS) to eliminate academic fraud.
- DOI:** 10.5281/zenodo.20655578 | **Read Paper:** thesesjournal.com

CERTIFICATIONS

Web Programming with Python and JavaScript (Harvard CS50)

August 2025

Certified React Developer (HackerRank)

July 2025

Blockchain Basics (Cyfrin Updraft)

October 2025
